

Cases & Scenarios Overview

Use Cases & Scenarios to create content for an encounter between a learner and a standardized patient (SP) or a simulator (manikin).

Click **Cases & Scenarios** to create the following:

SP Case	A learner meets with a Standardized Patient (SP) during an encounter.
Scenario	An SP learner meets with a simulator (manikin) during an encounter.
Classification	A filter that can be used to search for a case or scenario.
Competencies	A skill set, a set of defined behaviors that provide a structured guide enabling the evaluation of behaviors in individuals.
Checklists	Evaluation tool used to assess the performance of a learner or an SP during an encounter.
EHR (Electronic Health Records)	Create virtual patients, and develop their medical histories via a library of electronic forms to enable learners to practice using an electronic health record as part of their clinical training.
Case Collections	Define a set of cases to use in a session.
Case Authoring	Collaborate with other authors to create a case.
Case Trainer	Create a self-study case for an SP, learner or educator.
Areas for Review	Subject matter to be reviewed and used for the training of the case.
