

Rooms

To view Video by room, click **Video > Rooms**.

The Rooms grid includes the following:

| | |
|------------------------|--|
| Date | Date of recorded video |
| Room | Room the recording took place |
| Case / Scenario | Name of the case or scenario |
| SP | Name of the SP who participated in the session |
| Learner | Name of the learner who participated in the session |
| Delete | Click the Delete X to delete the video from the list |

Viewing Dynamic Video for Camera Switching

You can configure your cameras for dynamic recording, requiring only one DVCS for a group of cameras and allowing one view per room/camera from a drop-down list to enable smoother recording transitions between cameras. This functionality is configured for your room in the Settings module, but the room/camera selections are chosen from a drop-down list in the AV Control and Viewer applications (with these views mirrored in the Video Web application for the same room selection).

Note: For this configuration, the standard camera link selections for the rooms (e.g., Cam A, Cam B, Vitals) are replaced by the Dynamic link, as shown above.
